**4**

underground levels

**9**

elevators

**172,000 m³**
of total excavation**230 m**

of platform screen doors

**16**

escalators

**32 m**

excavation depth

Line C connects the city

This station marks **the first interchange between Line C and Line B**, a key junction designed to enhance urban mobility and make public transport more efficient and sustainable.

**1st** Line B–Line C
interchange

History beneath the Colosseum

The station's design **incorporates archaeological discoveries made during construction, showcased through dedicated museum-style and multimedia installations**. Highlights include a **laconicum** (a Roman thermal bath) and **28 Republican-era wells**, featured in an immersive experience that guides visitors through the story of the Fori Imperiali.

**29,000 m³**
of archaeological
excavation, a volume
roughly equivalent
